

TWO-FACTOR AUTHENTICATION SECURITY

Two-factor authentications verifies users' identities and the health of their devices before they connect to your applications, offering secure access through the world's most advanced multifactor authentication service.

Ackcent Cybersecurity is **Duo Security's** strategic partner in Spain and offers as part of its security portfolio this multifactor authentication (MFA) solution that is a leader in push technology, which guarantees easy and efficient use.

ADVANTAGES

COMPLIANCE

Ensures easy compliance with industry security regulations, certifications and standards for strong authentication such as PCI DSS, OWASP, ISO 27001, NIST and HIPAA

BYOD

Facilitates the use of personal devices without the need to install an agent, to maintain privacy while protecting access to applications from BYOD devices

CLOUD

Provides secure, consistent and traceable access to cloud applications through Single Sign-On (SSO), and the unified management of global access policies to cloud-based and on-premise applications

COMPATIBLE

Integrates VPN, Active Directory, AWS, Office365, SalesForce, SAP, Oracle, and any other applications through ADFS, SAML or APIs, as well as the latest mobile technologies

Authenticated!

PROCESS

Duo uses the main login to verify users and their personal and physical devices

PRIVACY

As an independent system, **Duo** never uses the passwords of its users nor does it collect any personally identifiable information.

As a Managed Service Provider, **Ackcent** provides a 24x7 managed service from its Security Operations Center (**SOC**), which includes:

- **Specialized support** in the design and administration of an MFA solution
- **Monitoring and management of alerts and incidences:** anomalous behaviour, possible access breaches; stolen credentials and identity theft
- **Monthly reports:** on activities, statistics and risks
